TERZO POWER SYSTEMS, LLC. AWARDED MAJOR CALIFORNIA ENERGY COMMISSION GRANT

\$2.4 Million Towards Advanced Hydraulic Technology and Energy Efficiency

El Dorado Hills, CA, - June 15, 2017

Terzo Power Systems, LLC., a Northern California-based fluid power industry start-up company focused on its' innovative HydraPulse integrated hydraulic control solution, announced today that it has been awarded a grant through the California Energy Commission (CEC) Electric Program Investment Charge (EPIC) program. The award includes over \$2.3 million, the maximum amount in this segment, as well as an additional \$126,000 in matching funds.

"We are excited and extremely proud to be selected for this CEC grant," said Mike Terzo, the Founder and CTO of Terzo Power Systems, LLC. "The \$40 billion-dollar industrial and mobile fluid power industry is only slowly adapting to new technology and expectations for energy efficiency, hybrid powertrains, and connected software controls and communication. Our innovative, integrated HydraPulse technology is an extraordinary step towards meeting those expectations. This grant will allow us to develop a stronger database of testing and research, further validating the HydraPulse concept."

The patent-pending HydraPulse solution smooths the path to federally and state-mandated energy efficiency goals including the EPA Tier 4 compliance by combining the critical elements of a hydraulic power system into a compact yet durable package. Fully programmable, the HydraPulse system is compatible with any existing industrial/agricultural equipment while eliminating many of the costly and space-dependent components required with typical installations.

About Terzo Power Systems, LLC.

Terzo Power Systems is dedicated to the development and manufacture of high performance, compact, and ultra-efficient hydraulic systems and off-road, heavy-duty hybrid system technology. We have developed the HydraPulse technology as a clean-sheet innovation designed to benefit all segments of the industrial and mobile fluid power markets. An elegant solution to a complex and costly problem, the HydraPulse integrated power and control unit is the next generation of fully compatible, fully programmable and highly efficient hydraulic power systems.
